

# PAC-3<sup>®</sup>

The PAC-3 family of missiles are combat-proven Hit-to-Kill interceptors that defend against incoming threats - including tactical ballistic missiles, cruise missiles and aircraft - using direct body-to-body contact that delivers exponentially more kinetic energy on the target than can be achieved with blast fragmentation mechanisms. Fourteen nations have chosen PAC-3 for missile defense.

## Production

1350+  
PAC-3 MSEs

Increasing to annual production of 550 PAC-3 MSEs by 2024

## Performance

90+  
successful MSE  
and CRI flight tests

Demonstrated Integration  
F-35 | IBCS | THAAD | AEGIS

## Economic Impact

7,200+ direct & indirect jobs

400 Suppliers, 37 states, 5 countries

## PAC-3 MSE Capabilities

Building on the combat-proven PAC-3 CRI, the PAC-3 MSE expands the lethal battlespace with a two-pulse solid rocket motor, providing increased performance in altitude and range.

### Maneuverability

Larger control fins and upgraded actuators increase agility

### Precision

Engages threats through Hit-to-Kill technology

### Protection

Defends ground forces and critical assets against current and evolving threats

### Range

A large dual-pulse solid rocket motor extends reach and adds thrust
